Abstracts Appearing In THE JOURNAL, May-August, 1960

During the past four months abstracts have been made of important articles in the journals listed. Any of the journals, except those starred, will be lent by the Library of the American Medical Association to individuals in Continental United States and Canada who subscribe to its scientific periodicals and to members of the American Medical Association and its student organization. No charge is made to members, but the fee for other borrowers is 15 cents in stamps for each periodical. Three journals may be borrowed at a time for a period not exceeding five days. Thus most of these journals are accessible to the general practitioner.

SUBJECT INDEX

Extensive revisions have been made to the index to volume 174. For clinical medicine, subject headings of the National Library of Medicine have been adopted; medical socioeconomic headings have been revised.

There has been an attempt to make headings more specific. The number of general headings, under which a multitude of entries may be listed, has been reduced. Selected organizations and persons are indexed under the proper name with a cross reference from subject. The heading "Deaths" still follows all entries after the letter "D."

There are more main headings as well as more complete coverage of news items, although the index is shorter. This has been achieved through choice of heading, use of abbreviations, shortening of the descriptive entry, and a change in format. The latter has been revised so that subject headings will be in bold and lower case type. This enables all entries to be flush left, thus saving several spaces per line. Abstracts from the Literature are not indexed.

The asterisk (*) indicates an original article; editorials, news, and correspondence are not distinguished. Page numbers refer to boldface numbers in the text. Items indexed from the advertising pages include both issue number (bold) and paging. The name of the main author, in brackets, follows the entry. The author index now includes the title of the article under the main author; reference is made from the joint authors.

For the first time in many years, the index will appear in the last issue of the volume indexed. It is hoped that these changes will expand the usefulness of the *JAMA* index.

Abbreviations

Words ending in -ology and -ological are abbreviated as -ol. A compound word, the second part of which is capable of abbreviation, is itself abbreviated, as cardiopulm. for cardiopulmonary. States are abbreviated.

Abstracts Appearing In THE JOURNAL, September-December, 1960

During the past four months abstracts have been made of important articles in the journals listed. Any of the journals, except those starred, will be lent by the Library of the American Medical Association to individuals in Continental United States and Canada who subscribe to its scientific periodicals and to members of the American Medical Association and its student organization. No charge is made to members, but the fee for other borrowers is 15 cents in stamps for each periodical. Three journals may be borrowed at a time for a period not exceeding five days. Thus most of these journals are accessible to the general practitioner.
